**Tabla S1. Definición de grupos de causas y códigos *garbage* mediante códigos de la Clasificación Internacional de Enfermedades, décima revisión (CIE-10), adaptados de las categorías del estudio de Carga Global de Enfermedades 2023 (GBD 2023). Los códigos inexistentes o mal clasificados fueron depurados.**

| Grupo causas | Causas                            | Códigos CIE-10                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**Figura S9. Evolución temporal de las tasas de mortalidad por códigos *garbage* (GC) estandarizadas por edad en las jurisdicciones de la Región Centro. Argentina, 2010–2023. Los puntos representan las tasas observadas en escala logarítmica (log-tasa) y las líneas corresponden a los valores ajustados mediante modelos de regresión joinpoint. Las líneas verticales en gris señalan los puntos de cambio en la tendencia, mientras que la variación de color en líneas y puntos identifica los distintos períodos delimitados.**

**Figura S10. Evolución temporal de las tasas de mortalidad por códigos *garbage* (GC) estandarizadas por edad en las jurisdicciones de la Región NEA. Argentina, 2010–2023. Los puntos representan las tasas observadas en escala logarítmica (log-tasa) y las líneas corresponden a los valores ajustados mediante modelos de regresión joinpoint. Las líneas verticales en gris señalan los puntos de cambio en la tendencia, mientras que la variación de color en líneas y puntos identifica los distintos períodos delimitados.**

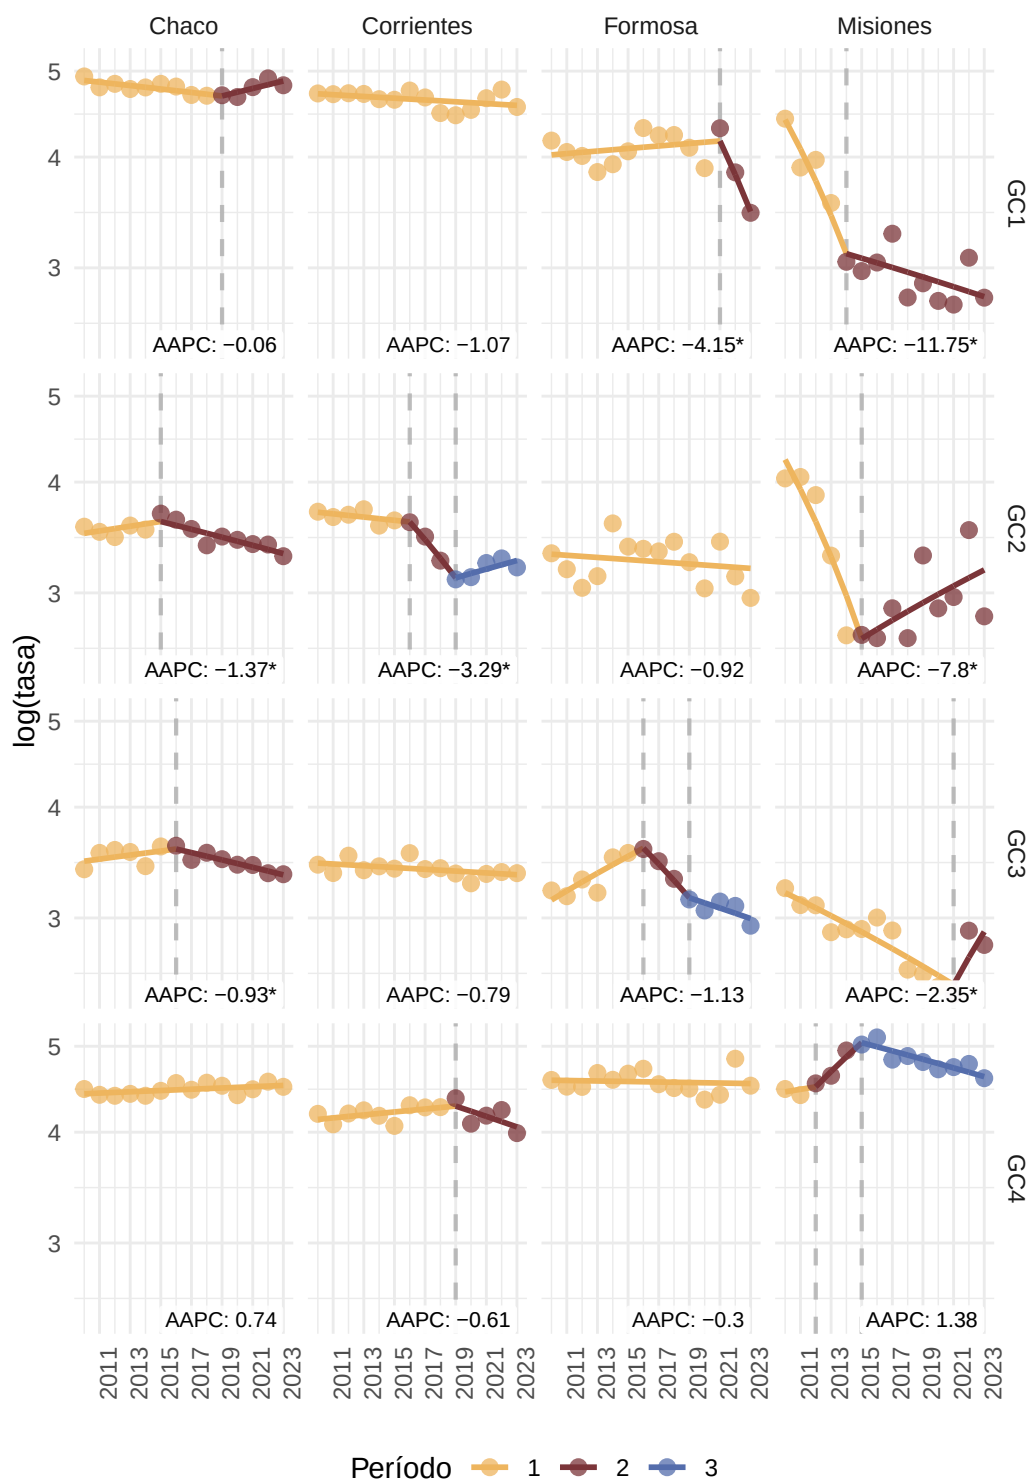

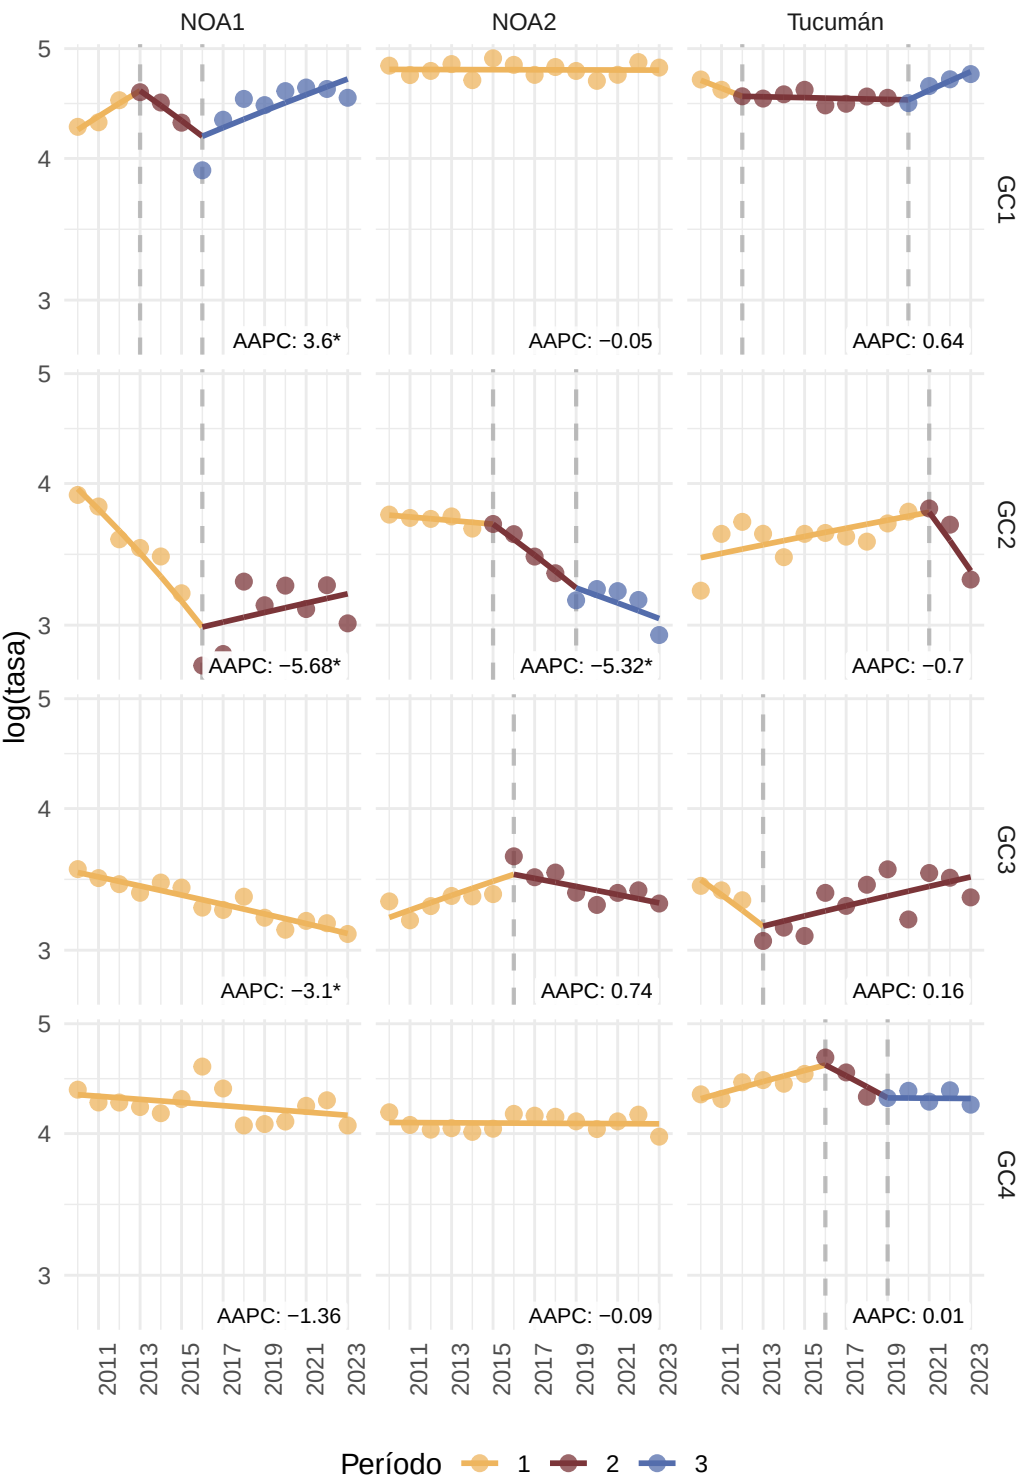

Figura S11. Evolución temporal de las tasas de mortalidad por códigos *garbage* (GC) estandarizadas por edad en las jurisdicciones de la Región NOA. Argentina, 2010–2023. Los puntos representan las tasas observadas en escala logarítmica (log-tasa) y las líneas corresponden a los valores ajustados mediante modelos de regresión joinpoint. Las líneas verticales en gris señalan los puntos de cambio en la tendencia, mientras que la variación de color en líneas y puntos identifica los distintos períodos delimitados.

**Figura S12. Evolución temporal de las tasas de mortalidad por códigos *garbage* (GC) estandarizadas por edad en las jurisdicciones de las regiones Cuyo y Patagonia. Argentina, 2010–2023. Los puntos representan las tasas observadas en escala logarítmica (log-tasa) y las líneas corresponden a los valores ajustados mediante modelos de regresión joinpoint. Las líneas verticales en gris señalan los puntos de cambio en la tendencia, mientras que la variación de color en líneas y puntos identifica los distintos períodos delimitados.**
